Final data compilation and analysis will be carried out by BAM.

Deliverables and Dissemination

This interlaboratory study will be disseminated at scientific conferences and in a peer-reviewed scientific journal. Further, the ISO 21363 (Nanotechnologies — Measurements of particle size and shape distributions by TEM) will be completed with measurement of concentration of bimodal NPs from liquid suspension, including deposition protocols for imaging methods.

International Participation

Current participation includes volunteers from countries from all continents. Depending on the number of interested participants, more volunteers with methods other than electron microscopy, AFM and SAXS will be also considered.
